PROFILE

Machine Learning/Artificial Intelligence Engineer | Built LLM-driven competitor intelligence and production pricing models on GCP/Vertex AI and FastAPI; improved quote accuracy by 15% and cut processing time by 20% across 100+ Printed Circuit Board (PCB) segments; experienced with MLOps, containerized deployments, and cloud data warehouses (BigQuery/Oracle).

WORK EXPERIENCE

Machine Learning/Artificial Intelligence Intern, Sanmina Corporation

Apr 2025 – Present

- **Automated Competitor Intelligence Pipeline:** Saved 10+ hours of manual research weekly by engineering a containerized (Docker, Python/FastAPI) serverless pipeline that automatically processed 500+ articles and delivered intelligence via Vertex AI (Gemini).
- **Adaptive Forecasting Suite:** Established the first multi-dimensional forecasting capability for the PCB business, providing coherent predictions across 100+ business segments. Deployed a containerized (Docker) suite of diverse ML models (statistical, gradient boosting, deep learning) as an automated job on Google Cloud Platform.
- **Predictive Analytics Engine:** Improved quote accuracy by 15% and cut processing time by 20% with a production model trained on 36 months of historical PCB quoting data. Exposed top cost drivers to business users via a FastAPI endpoint with <300ms latency, handling hundreds of daily requests on Google Cloud Platform.
- **Profit Optimization Dashboard:** Uncovered key revenue opportunities and gaps in vertical integration by designing and launching a business intelligence dashboard using Preset.io through engineering complex SQL queries to transform and aggregate data from Oracle and Google BigQuery.

IT College Graduate Program (Intern), Sanmina Corporation

Oct 2024 – Apr 2025

- Accelerated team adoption of cloud analytics by creating comprehensive documentation and leading training sessions on Google BigQuery for the Defense & Aerospace team.
- Engineered automation scripts to streamline extraction and transformation of production data, strengthening reliability and consistency across multi-departmental analytics workflows.

Software Engineer, Cognizant

Jun 2022 – Aug 2023

- Increased team efficiency by 20% while managing a five-person new-grad team to develop a full-stack e-commerce site using Spring Boot and Angular. Earned a 4.8/5 rating from senior engineers and executives for the final project presentation and successful delivery of the platform.

Data Engineering Intern, VMware

May 2021 – Aug 2021

- **Task Tracker Tool:** Reduced daily reporting and tracking time by 25% by developing and automating a task tracker tool using Python and SQL. The tool monitored data engineering jobs across AWS Redshift and S3, streamlining team operations and planning.
- **Gap Analysis:** Cut data pipeline maintenance efforts by 30% by conducting a gap analysis and re-engineering a critical SQL run job using Git. This streamlined the entire data processing workflow by consolidating data extraction to a single, reliable EDW pipeline.

EDUCATION

M.Sc. in Software Engineering & Cybersecurity, *University of West Georgia*

Aug 2023 - July 2025

B.Sc. in Data Science, *University of Texas at Dallas*

Aug 2018 - May 2022

SKILLS

- **Languages, Databases, & BI:** Python, R, Java, SQL, C++, JavaScript, HTML, CSS, BigQuery, Oracle, MySQL, Microsoft SQL Server, Snowflake, Apache Superset, Preset.io
- **ML Frameworks & Libraries:** LightGBM, N-BEATS, TimesFM, scikit-learn, XGBoost, pandas, NumPy, TensorFlow, PyTorch, Keras
- **Forecasting & Modeling:** Time Series Forecasting (ARIMA, ETS), Quantile Regression, Conformal Calibration
- **MLOps & Cloud:** GCP (Vertex AI, Cloud Run, Cloud Build), AWS (S3, Redshift), Docker, FastAPI, CI/CD
- **Developer Tools:** Git, JIRA, Agile, Visual Studio, RStudio
